## S&P 500 Update

The **S&P 500** is quickly approaching another critical Fibonacci target at 6118.34. What makes 6118.34 crucial is that it marks the same distance the S&P 500 traveled in the previous bull market run.

From the Covid crash low of 2191.86 to the January 2022 high, the S&P 500 traveled 2,626.76 points. From that point, a 10-month bear market began, bottoming at 3491.58. Adding the same distance traveled of the previous bull market of 2,626.76 points to the S&P 500 low of 3491.58 gets you precisely to 6118.34.

Reversals will commonly happen at 100% Fibonacci expansions. The size and significance of these back-to-back bull runs have created a Fibonacci target that should be watched closely.

The potential for a reversal from 6118.34 is likely. If a selloff happens and closes below the critical 5921.02 Fibonacci number from my long-term chart, it will indicate a substantial market top. A retracement that Holds at 5921.02 will likely propel the market with another leg higher.

## Chinese Market Update

*On Thursday and Friday, my focus turned back to **small-cap Chinese stocks** as they were again starting to move from constructive bases. At the end of the day on Thursday, I purchased **FinVolution (FINV)**, as it was confirmed from a cup-with-handle base that began on October 7.*

*The first impulse move in September was driven by extremely high accumulation levels, last seen in February 2021. It led to an explosive two-month move with a 158% gain.*

*Spending the last two months in a cup-with-handle base has left the recent accumulation unresolved and opened the way for considerably higher prices. The ability to close above the downward-sloping trendline of the handle and Fibonacci resistance at 6.86 on massive volume opens the way for the next move.*

*I focused on many other Chinese names Friday morning, including a repurchase of **Youdao (DAO)**. Since I sold DAO with a 30.7% gain at the Fibonacci target of 6.47, it has used the level as support that could springboard it to the next level. The coiled spring pennant has formed with accumulation that has continued to soar.*

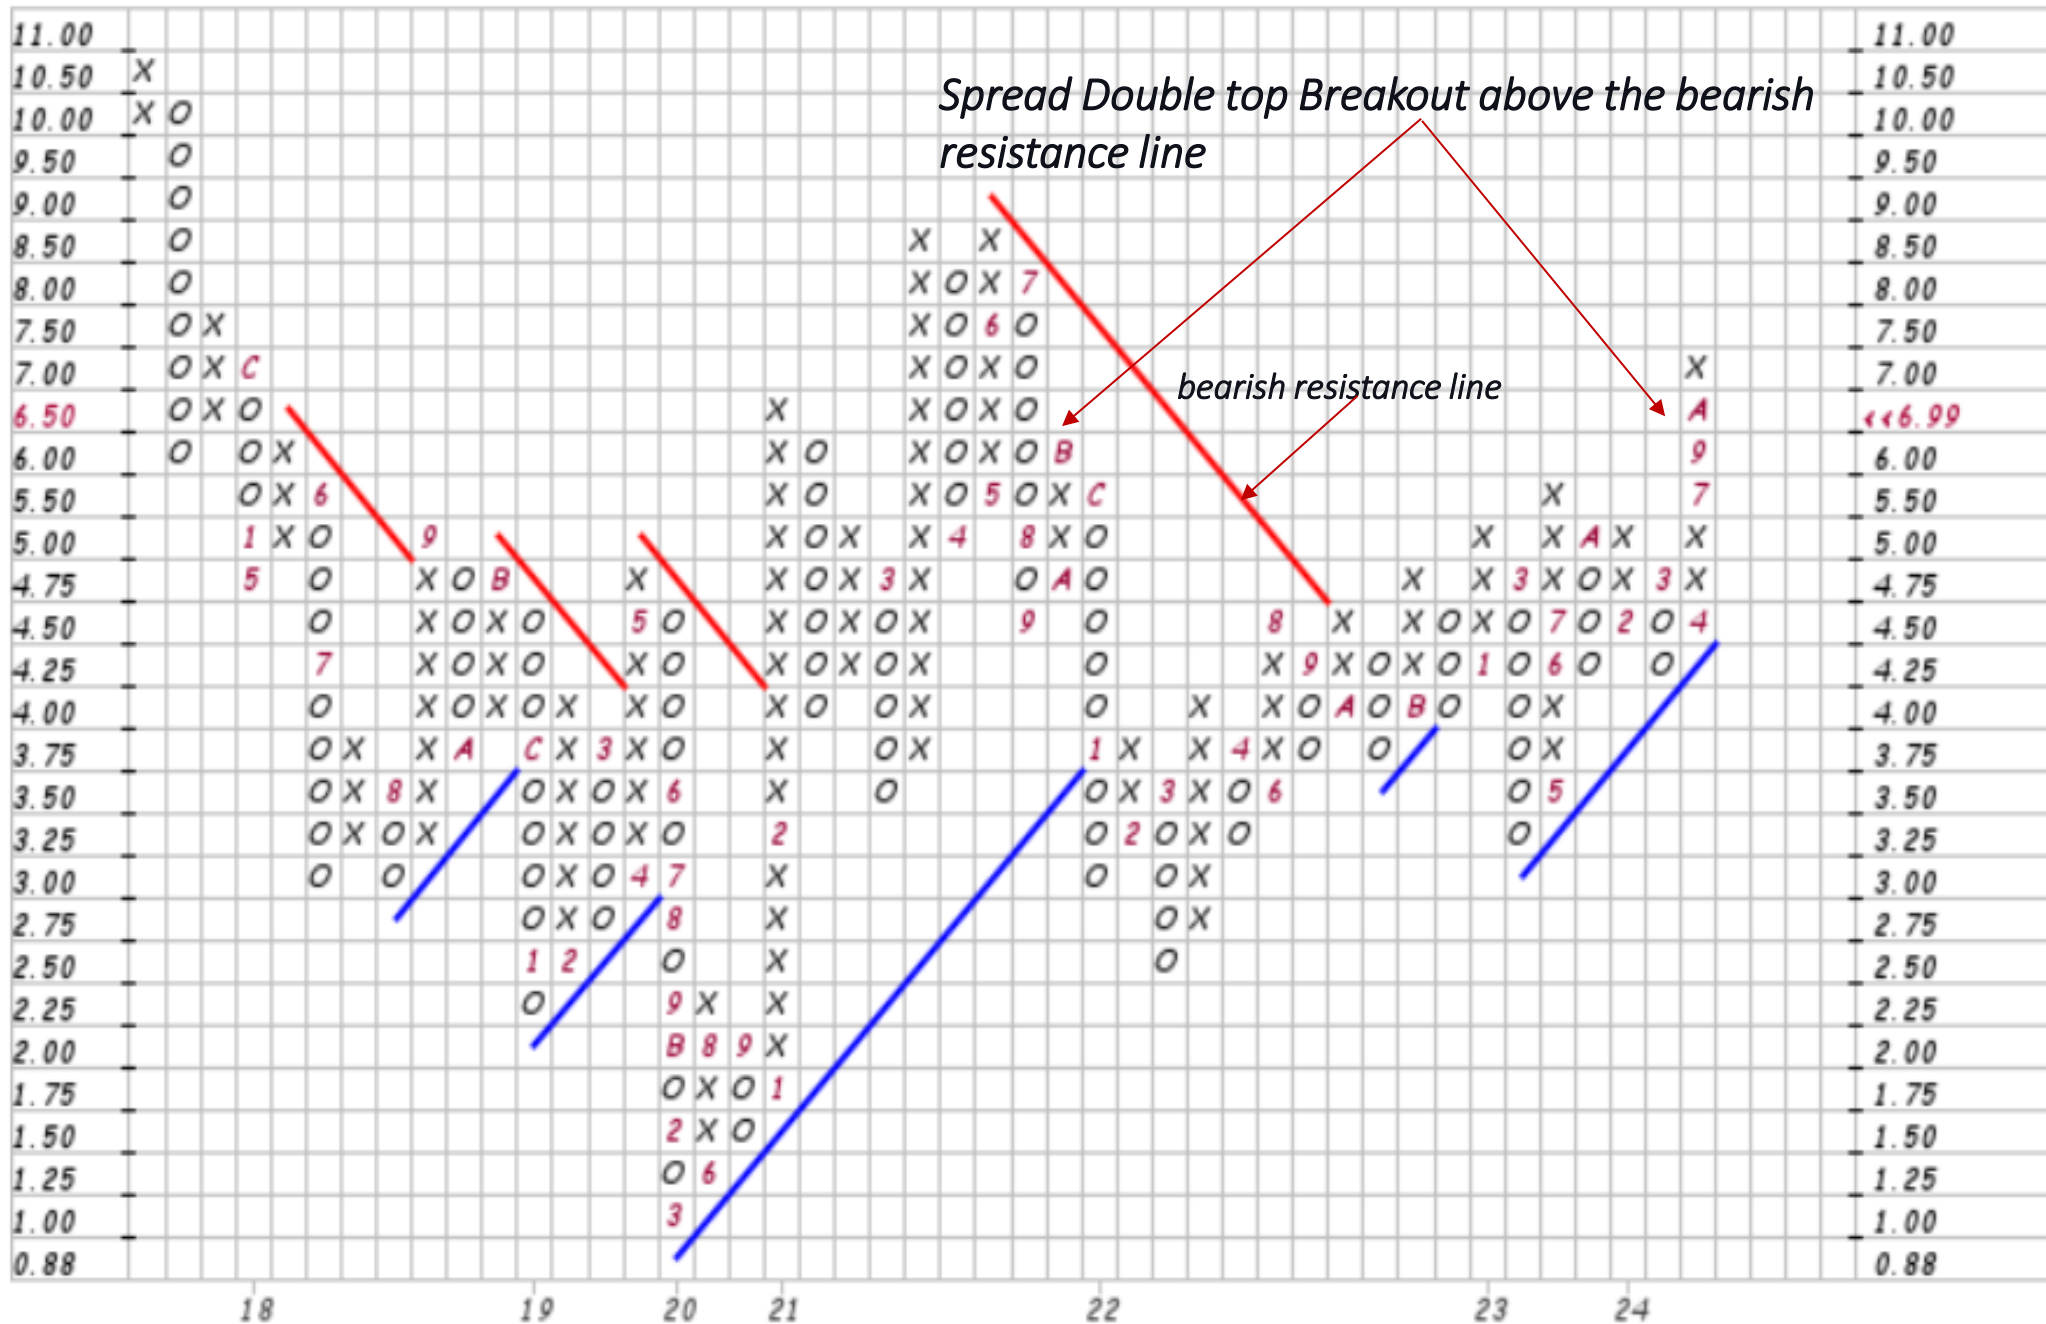

*I got confirmation on DAO as the Chinese market was lifting on Friday. A 6.65% move took shares to Fibonacci resistance at 7.04. Breaking 7.04 this week will send shares considerably higher.*

*Other Chinese names are on my radar, which should confirm soon.*

- *Youdao Inc. (DAO) broke out of a Spread Ascending Triple Top on the Point & Figure chart. I purchased Youdao Inc. (DAO) as it confirmed its next move. The move started as the base's handle coiled above the weekly Ichimoku cloud with massive accumulation. The up/down volume ratio is hitting 52-week highs, highlighting the unbelievable share demand as DAO breaks out of a seven-session pennant on Friday.*

- *Industry Group: **Quantum Computing**: The Quantum Computing group gave a buy signal on October 16. Since then, the group has been stair-stepping higher as accumulation is accelerating. The up/down volume ratio is at 52-week highs, indicating significantly higher levels. Many emerging leaders are starting to move on tremendous accumulation. Two weeks of closes above the weekly Ichimoku cloud also occurred for the first time since going public. The ability to clear the weekly cloud typically opens the way for blue skies and the start of a significant trend. A triple top breakout on the point & figure chart highlights significant demand that sends a stock considerably higher. ## Confirmed Buy : InflaRx (IFRX)

- *Industry Group: **Medical Biotech**: The Biotech group is in a sell signal, but the bulls retook 50% of the recent range this week, indicating the bulls are taking control. It is unusual that I would purchase a Biotech when I am short the healthcare sector, but the price setup and accumulation on InflaRx (IFRX) looks so strong that it could move against the industry. I am keeping a tight because it is a play against the sector.*
- *InflaRx (IFRX) is a German company that develops first-in-class potent and specific inhibitors of C5a.*
- *InflaRx (IFRX) completed a four-week cup-with-handle base that confirmed its purchase on Thursday. The one-day shakeout on the handle tagged 50% of the range, creating a well-structured base as the bulls retained control. On Friday, shares raced to the first Fibonacci target at 2.67, and I sold 1/3 of the position to lock in a quick 9.9% return. Accumulation is massive as it moves to the strongest since April 2023, when the stock had an incredible two-day pop with a 252% gain. A double top breakout on the point & figure chart also points to strong demand.*
- **Position Started at 1 star.**
